• Elden Ring Game is a new Fantasy Action RPG that is constructed from the game materials of an IP that was established in the form of a visual novel project under a different name and released for free on the web. • Created by the subsidiary company of the company that developed the character design work for 'No Guns Life'. • Established the same game-world as Senran Kagura, to implement the original story and the original heroine. • The game features a realistic heroine who has the cool look from Shinovi Versus and the charm of Senran Kagura, a unique and rich game world, a unique battle system, and a sophisticated story mode.

localization of the human pro alpha 1(I) and pro alpha 2(I) chains, as revealed by proteinase K protection of polypeptides. For characterization of the human type I collagen chains, the complete pro alpha 1(I) and pro alpha 2(I) cDNAs were cloned and sequenced. The human pro alpha 1(I) chain contains 1361 amino acids and the human pro alpha 2(I) chain contains 1380 amino acids. These collagens share a high degree of amino acid homology (90.4%) and their pro alpha chains are identical except for one amino acid in the pro alpha 1(I) chain. The human pro alpha 1(I) and pro alpha 2(I) chains were expressed in Escherichia coli and the recombinant proteins were isolated and purified. Proteinase K protection experiments using E. coli extracts and the human pro alpha 1(I) and pro alpha 2(I) recombinant proteins showed that the human pro alpha 1(I) and pro alpha 2(I) chains are localized in the cytoplasm of mammalian cells in a similar fashion to the type III procollagen chains.
