The Cannonball: NYC's Midnight Marathon - esm ===== toomuchtodo > O'Malley was one of the few participants who wouldn't admit he'd been > training, saying he barely runs at all, preferring to cycle instead. A 70yr old runner wearing a cycling shirt to a marathon? Not my cup of tea. Toxicity of rosiglitazone alone and in combination with advanced glycation end products in retinal endothelial cells. To test the toxicity of rosiglitazone alone and in combination with advanced glycation end products (AGEs) to retinal endothelial cells. Retinal endothelial cells were treated with rosiglitazone alone or with 10 microg/mL of AGEs added. After incubation for 3 days, cell viability was assessed by 3-(4,5-dimethylthiazol-2-yl)-5-(3-carboxymethoxyphenyl)-2-(4-sulfophenyl)-2H-tetrazolium, inner salt (MTS) assay. Cells were stained with propidium iodide for cell cycle analysis. Concentration-dependent and time-dependent increases in the number of apoptotic cells were observed with increasing concentrations of rosiglitazone and AGEs. Rosiglitazone induced S phase arrest. Incubation with 10 microg/mL of AGEs followed by rosiglitazone exposure at the same concentration produced significantly higher concentrations of apoptotic cells than did exposure to rosiglitazone alone. Combined treatment with 10 microg/mL of AGEs and rosiglitazone (80 and 160 microg/mL) decreased the number of viable cells compared with that following exposure to 10 microg/mL of AGEs alone. Combining 10 microg/mL of AGEs and 79a2804d6b
