Download BT Watcher Pro Portable Atomic Force Microscope for Scientists Description: The portable atomic force microscope works as a direct interface between your computer and your cell or material under investigation. It is suitable for the inspection of various material samples at home, in the laboratory, or in the field. The portable atomic force microscope works as a direct interface between your computer and your cell or material under investigation. It is suitable for the inspection of various material samples at home, in the laboratory, or in the field. The portable atomic force microscope is compatible with three different sample stages, covering both liquid and solid samples. The samples can be raster scanned in the range of 20 x 20 mm to 500 x 500 mm, with a resolution of 1nm. Moreover, the sample can be rotated at any angle in the range of 0° to 90°. When it comes to materials, users can conduct tribological experiments, such as friction, abrasion, and wear, to investigate the wear and tear of wear-resistant materials and samples. The portable atomic force microscope is suitable for the detection of single biological molecules and the observation of material changes in liquid samples. It can also scan complex material samples and display different types of information, such as the topography and the mechanical properties. This application provides a comprehensive feature set for scanning large sample areas, including 2D raster scanning and 3D raster scanning with tare and z-axis. Users can also rotate the sample by 360° in all three axes. Furthermore, the sample can be 2edc1e01e8

Sci-Heal is an award-winning, high-performance, cross-platform, and highly customizable software tool for computer-assisted cancer research. The program is optimized for use in clinical and basic research. It includes more than 150 utilities that are specifically designed to address needs in cancer biology. Sci-Heal is packed with almost 40 powerful tools. In addition to these utilities, the program includes more than 50 plug-ins that enable it to provide almost any functionality required by a research project. The solution can handle over 5,000 tools, and it also comes packed with other features, such as the ability to manipulate, sort, analyze, edit, and display thousands of data items, views and graphs, as well as the ability to automate processes by defining macros. Sci-Heal can be used by researchers, and scientists, pharmacists, bioinformaticians, and pathologists in their laboratory or research center. Description: Sci-Heal is a professional software for computer-assisted cancer research. Sci-Heal has a large community of researchers and clinicians who have evaluated it as a valuable tool in their own cancer research. All of the features are highly customizable and provide essential functionality for scientists in the development of cancer-related research. Sci-Heal features more than 100 specific tools that cover different areas of cancer research: molecular biology, pharmacology, cancer genetics, cancer cell biology, radiotherapy, radiation oncology, laboratory research, statistical analysis, and molecular diagnostics. The programs include two libraries that provide more than 40 plug-ins to add specific features. The included plug-ins allow researchers to add new tools such as pathologists, biologists, statistical analysis, and more. A wide range of useful and highly customizable work-flow options are available for researchers and scientists. There are several utility options to create molecular diagnostics, make 3D models, perform genetic screening, perform statistical analysis, and generate a number of different types of data. Sci-Heal has a powerful environment for automating, making intelligent filters, creating macros, and generating reports. There are more than 5,000 tools in the solution. Each tool has several options for customization, which provide the functionality required for a wide range of research projects. The solution comes with integrated database and file management, which allows researchers to store, analyze, display, and automate their data with precision and speed. InventHelp was founded in 1983.
