Show HN: Trello for Anything - frouzman ====== tokenizerrr Excuse me, but a simple comment on the app is that doing 'title' queries on a 'list' is stupid. What I mean is, it just doesn't make sense to search the whole list you have listed for 'title', because the whole thing may very well not have a title and so, filtering out the list isn't very meaningful. ~~~ huhriss Actually, list title searching is super useful, for what I use it for it's nice to see the list in alphabetical order and cross through "title" as a filter. I'd use it even if it had no title, it keeps the basic list organization. ------ VLM Based on geek culture HN is now a triplist, if you can't guess what I'm referring to, you can't be part of the club. Q: Having too many dependencies I was doing some gardening one day and was reminded of the destructor. If you consider this example private int type; public void Type() { if(type == 1) Console.WriteLine("integer"); if(type == 2) Console.WriteLine("double"); } public void Type(int type) { this.type = type; } And by keep the type set to a value it wil automatically create an object or factory, by setting the type to 2 it will build it's own object, and if you provide no value it means it should be 1,and one factory class type will build the object, and the same when creating an object the constructor expects you to pass a type of it

System Requirements For CYBER EMOJI TALE: PURESHKA SOUND:

Vulkan is not required, but any application that relies on the Vulkan API will run much better with it enabled. Requirements for the Graphics Subsystem: This graphics subsystem was designed from the ground up to support both graphics APIs. It has been tested for both Vulkan and DX12 and it has been proven to work as a fallback when the driver does not support one of the APIs. This graphic subsystem will work with either API, but we recommend using Vulkan, as it has been designed to support many more features and is the future of graphics.
